A Every perturbation, on one scale

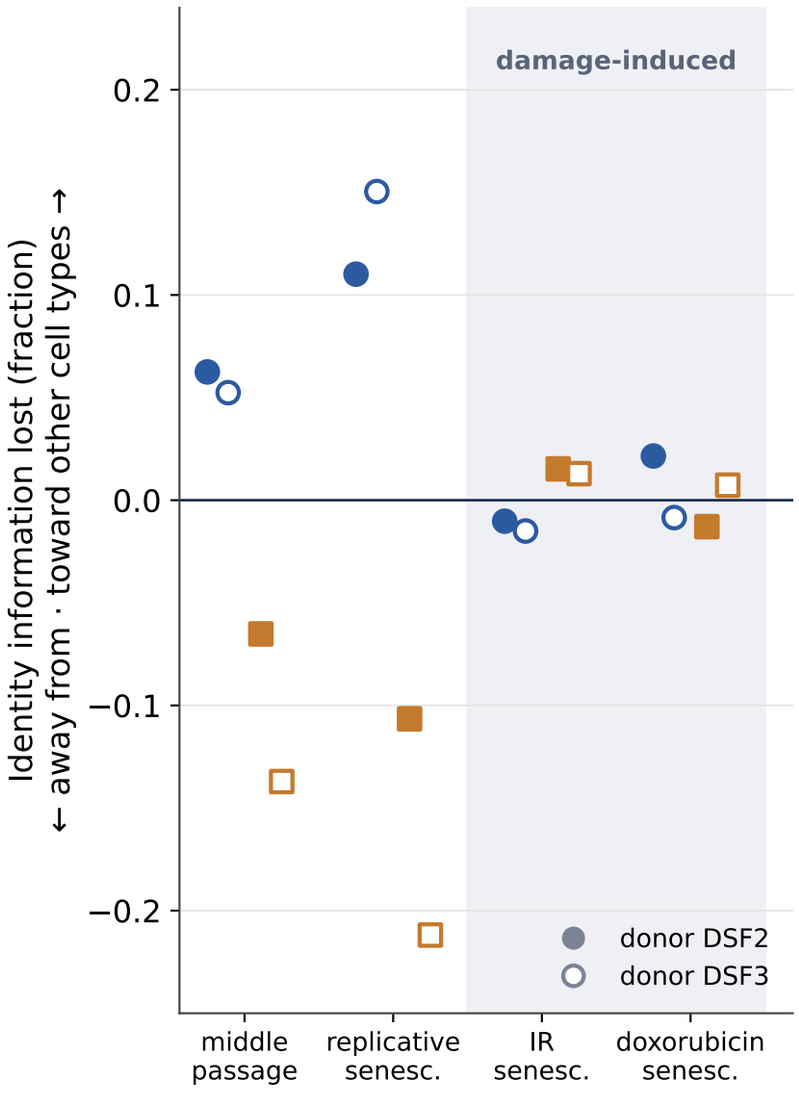

identity CpGs (352 UL / 10 UH)
proliferation-history CpGs (5,027 UL / 2,356 UH)
background term (subtracted)
open: p ≥ 0.05 or not testable

		n	p identity	p history
DAMAGE, THEN CONTINUED DIVISION				
Irradiated clones (2 Gy, ~20 doublings)	GSE112812	35 vs 11	**0.002**	**7.6 × 10⁻⁷**
same, excl. 2 outlier controls	GSE112812	35 vs 9	**0.010**	**5.7 × 10⁻⁶**
donor 2, not fibroblast-like	GSE112873	26 vs 20	**0.025**	**0.019**
Chronic low-dose radiation †	GSE197723	4 passage pairs	—	—
DAMAGE, THEN GROWTH ARREST				
Acute X-ray → senescence	GSE197723	24 pairs	**0.008**	**1.2 × 10⁻⁷**
IR-induced senescence (DSF2)	GSE227160	2 vs 1	—	—
IR-induced senescence (DSF3)	GSE227160	2 vs 1	—	—
Doxorubicin senescence (DSF2)	GSE227160	2 vs 1	—	—
Doxorubicin senescence (DSF3)	GSE227160	2 vs 1	—	—
REPLICATIVE OR ONCOGENIC STRESS, PROGERIA				
RAS oncogene-induced senescence	GSE197723	24 pairs	**1.2 × 10⁻⁷**	**1.2 × 10⁻⁷**
Replicative exhaustion	GSE197723	24 pairs	**1.2 × 10⁻⁷**	**1.2 × 10⁻⁷**
Replicative senescence (DSF2)	GSE227160	2 vs 1	—	—
Replicative senescence (DSF3)	GSE227160	2 vs 1	—	—
Progeria (HGPS) vs control	GSE149960	9 vs 6 people	0.69	**0.002**

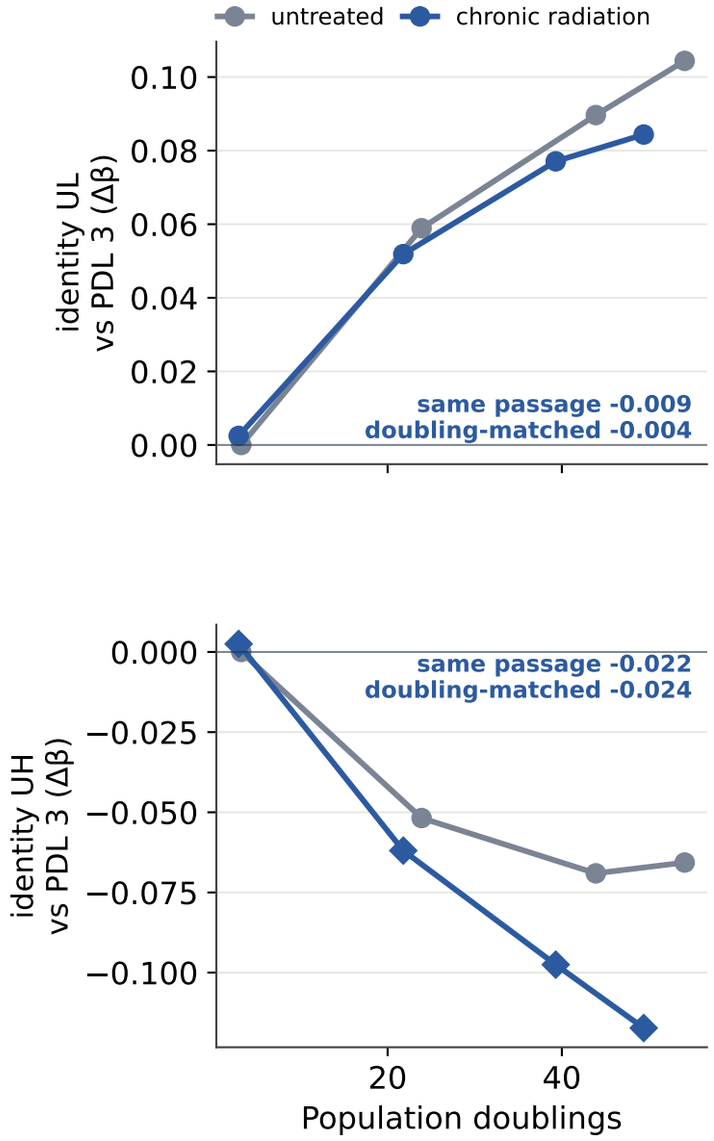

B

Two more donors (GSE227160) vs each donor's young culture

C

Chronic low-dose radiation (GSE197723)

D

Progeria vs control fibroblasts (GSE149960), person by person
